1. A simple triangle

Create a futuristic UI-style image of a 3D Draw a simple triangle on a canvas with the base labeled 12 cm and a dashed vertical line from the top vertex to the base representing the height of 8 cm. Clearly mark the base as ‘base = 12 cm’ and the vertical dashed line as ‘h = 8 cm’. Then calculate the area of the triangle using the formula \text{Area} = \frac{1}{2} \times \text{base} \times \text{height} and display the result.”Place the trianglr inside a soft glowing rounded rectangle panel with a deep blue / purple gradient background. Add subtle lighting reflections and glow effects around the triangle to give it a modern tech interface look. The triangle should look minimal, geometric, and floating, similar to a 3D wireframe cube rendered on a digital canvas. Style should resemble a modern AI/tech dashboard or futuristic UI design, clean, sharp, and high resolution.

2. 5 sided regular polygon

Create a futuristic UI-style image of a 3D 5 sided regular polygon on a canvas Place the 5 sided regular polygon inside a soft glowing rounded rectangle panel with a deep blue / purple gradient background. Add subtle lighting reflections and glow effects around the triangle to give it a modern tech interface look. The polygon should look minimal, geometric, and floating, similar to a 3D wireframe cube rendered on a digital canvas. Style should resemble a modern AI/tech dashboard or futuristic UI design, clean, sharp, and high resolution. label the vertices from v1 to v5

3. Circle

Create a futuristic UI-style image of a circle on a canvas Place the circle inside a soft glowing rounded rectangle panel with a deep blue / purple gradient background. Add subtle lighting reflections and glow effects around the circle to give it a modern tech interface look. The circle should look minimal, geometric, and floating, similar to a 3D wireframe cube rendered on a digital canvas. Style should resemble a modern AI/tech dashboard or futuristic UI design, clean, sharp, and high resolution. label the radius is x=7cm.create the image calculating the circumference

4. 5-pointed star

Create a futuristic AI dashboard style geometric illustration. In the center, place a large 5-pointed star with sharp symmetrical edges. The star should have a bright neon yellow glowing outline and a soft muted purple/gray fill inside.

The star should be placed inside a rounded rectangular panel with a deep blue to violet gradient background. The panel should look like a glassmorphism UI card with soft glow, subtle blur, and futuristic lighting.

Design details:

- Neon yellow outline star
- Soft glow around the star edges
- Minimalistic geometric style
- Holographic tech interface look
- Subtle white glowing streaks / light particles floating around the panel

- Smooth gradients and reflections
- Soft ambient lighting

Below the star, add centered text:
“5-Pointed Star”

Typography style:
- Clean monospace or futuristic digital font
- Light yellow / soft gold color
- Slight glow effect

Overall style should resemble a modern AI visualization card, futuristic tech UI, or holographic geometry display with high contrast neon lighting and a dark sci-fi background.

5-> **Circle with its radius labeled.**

Create a futuristic AI-style geometry visualization card showing a circle with its radius labeled.

Design a rounded rectangle panel in the center with a deep blue to violet glowing gradient background and soft glassmorphism effect.

Inside the panel:
- Draw a perfect circle with a neon pink / magenta glowing outline.
- The circle should be centered and minimalistic.
- From the center of the circle, draw a vertical dotted radius line upward to the circumference.
- Mark the center with a small glowing pink dot.
- Near the radius line add the label: “r = 5 cm” in a soft neon pink futuristic font.

Style details:
- Futuristic tech dashboard / holographic UI style
- Neon glow edges
- Subtle reflections and light streaks
- Minimal geometric visualization
- Soft ambient lighting
- Clean modern UI card design

Above the panel include a line of text:

“A circle has a radius of 5 cm. Write a prompt to calculate its area. (Use $\pi \approx 3.14$)”

The overall look should resemble a modern AI learning interface or futuristic mathematics visualization panel with dark background, glowing geometry, and sci-fi UI aesthetics.

6->**3D wireframe cube**

Create a futuristic UI-style image of a 3D wireframe cube centered on the screen. The cube should be made only with thin glowing neon lines, giving it a 3D perspective. Use a purple and pink neon gradient for the cube edges.
Place the cube inside a soft glowing rounded rectangle panel with a deep blue / purple gradient background.
Add subtle lighting reflections and glow effects around the cube to give it a modern tech interface look.
The cube should look minimal, geometric, and floating, similar to a 3D wireframe cube rendered on a digital canvas.
Style should resemble a modern AI/tech dashboard or futuristic UI design, clean, sharp, and high resolution.

8-> **A circle and an isosceles triangle.**

A precise, technical geometric diagram rendered against a white background with thin, clean black lines, detailing a complex construction involving a circle and an isosceles triangle. A circle with a clear center point (marked 'O') and a radius of 7 cm is centered on a horizontal diameter. The total diameter of the circle is 14 cm. This horizontal diameter, marked with points A and B (length 14 cm), serves as the base of a large isosceles triangle ABC. The circle is positioned such that its center O lies on the base AB. The upper semicircle of the circle (with diameter AB) is located entirely within the triangle ABC. An isosceles triangle ABC is constructed on the base AB. The sides AC and BC both have a length of 18 cm. The vertex C is located high above the midpoint of AB (Point M=O). The triangle ABC encloses the entire upper semicircle of the circle. The circle itself has a radius r=7cm and diameter 14cm. The base of the triangle (AB=14cm) coincides with the circle's horizontal diameter. The entire region above the horizontal diameter AB that lies *between* the upper semicircle's circumference and the interior of the triangle ABC is shaded with light gray hatching. The semicircle sits within the triangle, and the region between the semicircle's boundary (curved part) and the triangle's upper boundary (lines AC and BC) is shaded. The lower semicircle extends below the triangle's base AB. The diagram features clear black lines, the central circle with center O, diameter AB (labeled 'Base = Diameter = 14 cm'), triangle ABC with sides AC=BC=18 cm and base AB=14 cm, the shaded upper region, and labels: A, B, C, O, 'Radius = 7 cm', 'Side = 18 cm', 'Base = 14 cm', 'Upper Shaded Region (between Semicircle and Triangle)', 'Isosceles Triangle ABC', and 'Circle (Radius 7 cm)'. The construction is precise, labeled with mathematical symbols and numbers, with light gray shading define-ng the specified area.
